

## Introducing our **nationalgrid** approved process for LNER water re-use:

Tanked water on site is used and becomes out of spec as per Electrical Resistance requirements

Hydro-X Water Treatment Ltd. arrive on site and apply our Unique Re-circulating De-mineralisation Resin Process

Water is ready for re-use, and fully in-line with Electrical Resistance requirements

### KEY BENEFITS:

- Avoids the risk highlighted by recent environmental incidents where oils were released into natural water courses, resulting in legal action
- No need for de-mineralised water
- No need to arrange for removal of water from site
- Cost of effluent tankering is avoided
- Avoids risk of Environment Agency intervention on out of spec water discharges
